

Research and Professional Development

Research

- Are there opportunities for mentorship between researchers and interprofessional team members or opportunities to participate in research to support knowledge development?

Professional Development

- How will the integrated team be evaluated? How will the team communicate and network with other interprofessional teams to share what has been learned through working in an integrated approach?
- How will the team resolve any issues of trust and lack of understanding between CAM providers and those providing conventional therapies?
- How will the team reduce bias to promote an integrative environment?
- Are there opportunities for students to be involved in the integrative approach and to share knowledge, skills and potentially improve understanding for all involved? (Patterson & Arthur, 2008)
