

## Build Knowledge

Teaching Strategy	Considerations for Online Teaching
Group work/meetings	<p>Meet online via web-conferencing, or make use of an online discussion board. Many of these programs allow users to share resources and create documents collaboratively (University of British Columbia, n.d.). For example:</p> <ul style="list-style-type: none"><li>• Sharing references and resources can be done through websites such as del.icio.us (<a href="http://delicious.com">http://delicious.com</a>) and CiteULike (<a href="http://www.citeulike.org">http://www.citeulike.org</a>).</li><li>• Creating documents collaboratively using Google Docs (<a href="http://www.google.com/google-d-s/b1.html">http://www.google.com/google-d-s/b1.html</a>), and Zoho Writer (<a href="http://writer.zoho.com/home?serviceurl=%2Findex.doc">http://writer.zoho.com/home?serviceurl=%2Findex.doc</a>).</li><li>• Wikis can also be used for a shared workspace for resources, links and ideas. Thinkature (<a href="http://thinkature.com/about/">http://thinkature.com/about/</a>) is another tool for creating a shared workspace.</li></ul>
Complete a presentation	<p>Presentations can be created collaboratively online using web-based resources. Zoho Show (<a href="http://show.zoho.com">http://show.zoho.com</a>) is an online tool you can use for making presentations. Adobe also has free online tools to create documents and presentations (<a href="https://labs1.acrobat.com/#/">https://labs1.acrobat.com/#/</a>).</p> <p>Online teaching methods can easily make use of multiple ways of presenting information using multimedia applications such as audio, video, graphics, and interactive applications, along with traditional text (Hall et al., 2007).</p>
